GREAT SAWING HEAD ON INDUSTRIAL BED IN PERFECT COMBINATION

LT70 HEAVYDUTY sawmill combines the best features of sawing head from LT70 model and the advanced construction of the bed incorporated from the industrial sawmill WM4000. Providing highly efficient wood-processing at an industrial level, it makes an ideal choice for modern, large timber production factories. The sawmill is offered in two widths of the sawing head - STANDARD (for logs max. 95 cm of diameter) and WIDE (for logs max. 105 cm of diameter).

Options	SW PLC1 or SW PLC2 or Accuset2 Debarker Laser sight

Sawmill Bed Features & Options

Standard	Absorption roller Operator Station - Remote
Log Handling Packages:	
Manual Log Handling (standard)	Side supports, Clamp, Toeboards, Winch log turner (optional), Log loader (manual pump)
STANDARD Hydraulic Log Handling (optional)	Side supports, Central clamp on two rods, Log turner, Toe board rollers, Hold-down clamps, Log loader
SUPER Hydraulic Log Handling (optional)	Vertical side supports, Central clamp on two rods, Chain turner, Toeboard roller, Power roller with two cylinders, Hold-down clamps, Log loader
Additional Equipment (optional):	
	Log deck, Incline conveyor, Roller table, Transfer deck, Bed extension, Angled bed rails

Blade	LT70	LT70WIDE
Length	4670 mm	5000 mm
Width	38 mm, 50 mm	38 mm
Blade wheel diameter	600 mm (38 mm belted, 50 mm unbelted)	

LT70 HEAVYDUTY EQUIPMENT

SW10 Increases productivity using easy-to-use setworks to precisely position the head for the next cut.

Board Return Arms The solid-steel board return arms transfer freshly sawn boards from the sawmill to the conveyor.

Double Vertical Support Provide a surface to clamp the log against, allowing the log to be cut perfectly square.

Board Removal Conveyor Automatically activates when board is being removed.

Power Roller easily enables you to position the log on the bedrails, and can also assist in removing sawn cants.

A NEW HEAD WITH MORE CAPACITY

The well-known and very popular LT40 sawmill has its new version in the form of the WIDE head with larger capacity. In the new version of the LT40WIDE sawmill, distance between rollers reaches 84 cm, providing an increase of 12 cm compared to the standard version. A wider head allows you to cut logs of larger diameter - up to 100 cm. Ensuring even better blade stability the new LT40WIDE is equipped with an upgraded blade guide arm.

Length	5470 mm
Width	32 - 35 mm
Blade wheel diameter	483 mm (belted)

LX 100

ECONOMIC SAWMILL FOR HEAVY USAGE

This sawmill is built for heavy and continuous sawmilling use and features many innovations in strength, efficiency, and operator visibility.

MAX. LOG CAPACITY
70 cm

Pictured: LX100S3EH115

PERFORMANCE SPECIFICATIONS

CUTTING CAPACITY

Max. Log Capacity
70 cm dia.
5.40 m (M2 bed - 2 segments 2.75 m each)
5.58 m (S3 bed - 3 segments 1.85 m each)
8.10 m (M3 bed - 3 segments 2.75 m each)

Max. Width of Cut 64 cm
Max. Cant Width 58 cm

POWER

Standard 7.5 kW Electric
Optional 11 kW Electric
19 HP or 25 HP Petrol

NEW!

LX 50

THE ULTIMATE STARTER SAWMILL FOR HOBBYISTS AND SMALL BUSINESSES!

With simple-to-use features and sturdy construction, you can start your sawmilling adventure with a minimal investment, while still backed by Wood-Mizer's proven quality and customer service.

MAX. LOG CAPACITY
66 cm

CUTTING CAPACITY

Max. Log Capacity
66 cm dia.
x 3.8 m (3 segments 1.53 m each)
Max. Width of Cut 50 cm
Max. Cant Width 40 cm

POWER

Standard 5.5 kW Electric
14 HP Petrol

LX100 EQUIPMENT

SW10
Increases productivity with easy-to-use setworks to precisely position the head for the next cut.

Electric blade guide arm
The operator can easily adjust the position of the powered blade guide arm.

Manual log clamp
for precisely clamping cants and the last board.

Power feed is driven on a heavy-duty chain, more durable than other methods.

Log side supports are simple and stronger than ever.

Blade lubrication system
The blade lubrication helps keep the blade clean for smooth cutting.

LX100 SPECIFICATIONS

Sawmill Head Features & Options

Standard	Electric power up/down (for AC model) Manual feed system Electric blade guide arm Blade tension system Blade lubrication system
Options	SW10 Debarker Power feed

Sawmill Bed Features & Options

Standard	3 Side supports 2 Manual log clamps Log wedge Angled bed rails
Options	Additional bed sections: 1.85 m or 2.75 m Cant hook

Blade

Length	4010 mm
Width	32 mm - 35 mm
Blade wheel diameter	483 mm (belted)

LX50 EQUIPMENT

Saw head controls
Including forward/reverse and up/down for ease of operation and increased production.

Completely new Up/ Down System
for dependability accuracy and stability.

Manual log clamp
for precisely clamping cants and the last board.

xFrame stable structure that travels on twin parallel steel profiles on the bed.

Log side supports are simple and stronger than ever.

Blade lubrication system
The blade lubrication helps keep the blade clean for smooth cutting.

Compact for shipment

BED EXTENSIONS

MANUAL BED EXTENSIONS

Most Wood-Mizer portable sawmills can handle just about any log length imaginable. You can add 1.8 m or 3.6 m or 7.2 m extensions to the existing bed sections, and tackle super-long logs with ease. Bed extensions are not only useful for cutting single logs.

Many operators utilise extra-long beds in order to load and cut two logs in the same pass, increasing production dramatically. This is common in places where extra workers can assist the operator with log loading and handling while the operator concentrates on sawing.

MANUAL BED EXTENSIONS

BX6	1.8 m extension
BX12*	3.6 m extension
BX24*	7.2 m extension

Bed extension 0.5 m

* Bed extensions are also available with hydraulic package.

HYDRAULIC BED EXTENSIONS

Hydraulic bed extensions are available for LT20, LT40, and LT70 AC sawmills.

BX12 BED EXTENSIONS

BX24 BED EXTENSIONS

LOG & HANDLING SYSTEMS

3-sided Sorting Table (CRD)

Durable sorting table capable of transferring the material in 3 ways (left, right, straight). Segmental construction allows for extending the length from 3 m up to 9 m.

Log Deck (LD2)

Logs can be staged on the Log Deck, and fed forward one at a time onto the sawmill. The loading arms ensure only one log is transferred at a time.

Transfer Table (TD2)

The Transfer Table efficiently sorts timber in different directions. Timber can be sent directly forward, or diverted to an edger. Recommended for timber up to 6 m long.

Incline Conveyor (CB3)

The conveyor belt removes timber from the sawmill. After the cut is finished, the Board Removal System offloads the board from the bed onto the Conveyor Belt, which then moves the timber to the next processing stage.

ACCESSORIES

SETWORKS

Cutting wood on a daily basis requires a lot of measuring and math work, which reduces operator productivity. Wood-Mizer's electronic Setworks systems take the guesswork out of sawing, and increase recovery and productivity. Using a Setworks system, the sawmill operator does not need to work out the measurements and factor in the amount of wood removed by the blade. All he needs to do is set a required board width, and start cutting.

ACCUSET

Accuset significantly increases the operational flexibility provided by Simple Setworks and PLC Setworks. In addition to 16 programmable memories for board thickness, the system also has four operational modes (Manual Mode, Auto Up/Down Mode, Pattern Mode, Pattern Mode).

PLC Setworks

The PLC Setworks is for sawmills equipped with AC up/down motors. The functionality is very similar to that of the Simple Setworks with the capacity for two operator programmable dimensions, which can be selected at the touch of a button.

SW-PLC2

Automatically lowers the saw head to a preset cutting height. The SW-PLC2 is based on a programmable logic controller (PLC), a magnetostrictive measuring strip, a programmable control panel and a rotational speed controller used in asynchronous motors.

SW Setworks

The SW Setworks increases productivity and accuracy using rugged electronics to quickly position the head for the next cut. Available for both AC and DC mills, the SW setworks is easy to use and allows you to change board sizes very quickly, without the need to preprogramme every dimension needed.

DEBARKER

Because the outside of a log is often covered in mud, sand or abrasive bark, a debarker is essential to improving the cutting life of your sawmill blades. The debarker clears a path in front of the blade, preventing your blades from running through mud, rocks, or thick bark. The debarker's powerful motor will help you keep your blades in great shape between sharpening and extend overall blade life. And the less time you spend changing and sharpening your blades, the more time you'll spend sawing.

This debarker is available for LT40 and LT70 mills.

Every LT15 and LT20 sawmill comes prewired and ready to fit the optional debarker, which extends blade life by pre-cleaning the log.

CANT HOOK

These traditional logger's tools are a must for every sawmill. They are used to roll, lift, move, and pivot logs on your machine and around the sawmill. You will need a minimum of two for basic log handling.

Cant Hook

Our cant hook is made from special hardened steel and feature 1.2 m wooden handles.

Steel Cant Hook

Durable, long-lasting, with a special hardened steel handle and a comfortable rubber grip, 1.2 m and 0.7 m length steel cant hooks.

WOODWORKING PRODUCTS

Wood-Mizer is proud to now offer a workshop range of planers/moulders for anyone making finished lumber, in addition to the legendary line of sawmills that have enabled people to process logs into lumber for more than 35 years.

Engineered for professional woodworkers, carpenters, or joiners in the construction trade, Wood-Mizer planer / moulders plane and mould boards on all four sides in a single pass into a variety of professionally finished products including flooring, planed boards, crown moulding, cabinet trim, paneling, door and window frames, furniture components, and more.

PLANERS / MOULDERS / THICKNESSERS

INDUSTRIAL AND TITAN SAWMILLS

Improve profitability with innovatively designed industrial sawmilling solutions that maximize productivity, reduce labour requirements, and increase recovery from every log.

BLADES

Wood-Mizer blades
 INNOVATION. PRECISION. PERFORMANCE.

BANDSAW BLADES

Using the best sawmill blade is key to increasing production, improving cut quality, and reducing costs for your sawmilling or resawing company. From sawing green softwoods to abrasive hardwoods, Wood-Mizer manufactures an extensive range of sawmill bandsaw blades with more than 100 combinations based on profile, width, thickness, tooth spacing, and alloy for any type of sawing or resawing application.

WOOD CUTTING TOOLS

Wood-Mizer TOOLS
 WOOD CUTTING BLADES AND KNIVES

CIRCULAR BLADES

Multirip, rip saw, and crosscut circular saw blades from Wood-Mizer cover just about every sawing application – for wet or dry softwoods and hardwoods, as well as tropical hardwoods and panels. Our blades are covered with an anti-friction coating, which protects the blade against the surface build-up and over-heating.

PLANER AND JOINTER KNIVES

Wood-Mizer supplies planer knives, serrated back knives, and tungsten-tipped knives depending on your needs and applications. Planing and profile knives are available for Wood-Mizer's own range of planer/ moulders, plus other machines.

FRAME SAW BLADES

Frame saw blades from Wood-Mizer are made from German steel, the teeth are stellite-tipped, the surface is chromium-plated, and special lengths are available upon request.

Wood-Mizer Industries, Poland

Since 1982, Wood-Mizer has taken thin-kerf, narrow-band technology and production well beyond what anyone ever imagined possible. Because of the company's rich history of patents and innovative designs that challenge traditional thinking, Wood-Mizer is recognized as a worldwide leader in the forest industry.

Through a network of locations and dealers around the globe, Wood-Mizer provides solutions to customers that require everything from a single machine to complete systems to efficiently and profitably process wood.
